Table T.1: Statistics of the utilized MIMIC and CheXpert subsets per split and subgroups.

Influence of Protected Features on Model Prediction

The following figures are an extension of the results presented in Section and visualize Table 1. This includes the distribution of coefficients and p-values over ten randomly initialized runs obtained from the *evaluation model*. The results are shown for the three exemplary labels *Pleural Effusion*, *Cardiomegaly*, and *No Finding*.

Pathology: Pleural Effusion

(a) Coefficients for *Pleural Effusion*.

(b) p-values associated with the respective coefficients.

Figure F.1: Distribution of derived coefficients and p-values for 10 downstream models per embedding and protected feature category on the label *Pleural Effusion*.

Pathology: Cardiomegaly

(a) Coefficients for *Cardiomegaly*.

(b) p-values associated with the respective coefficients.

Figure F.2: Distribution of derived coefficients and p-values for 10 downstream models per embedding and protected feature category on the label *Cardiomegaly*.

Pathology: No Finding

(a) Coefficients for *No Finding*.

(b) p-values associated with the respective coefficients.

Figure F.3: Distribution of derived coefficients and p-values for 10 downstream models per embedding and protected feature category on the label *No Finding*.

Table T.2: Regression/Classification performance for deriving protected features from an embedding vector with mean and standard deviation over 10 randomly initialized runs. The displayed metrics include mean absolute error (MAE), R^2 for age regression as well as AUC, sensitivity (sens.), and specificity (spec.) for classification.

Table T.4: Prediction performance original versus orthogonalized data on the MIMIC and CheXpert datasets. The table shows the mean and standard deviation over 10 randomly initialized runs for the labels *Pleural Effusion*, *Cardiomegaly* and *No Finding* and the metrics AUC, accuracy, sensitivity, specificity, precision, and F1-score.
